

## TempaSure® Evaluation Kit

TempaSure® is a revolutionary system designed for the perishable goods industry using RFID technology to track temperature as well as temperature variations during storage, transportation and shelf life of:

- Produce
- Meat, Poultry & Seafood
- Dairy Products
- Organs and Blood
- Pharmaceutical Products
- Horticultural Products
- Chemicals and Hazardous materials

### The TempaSure® system operates as follows:

TempaSure® is a complete hardware and software solution which enables you to monitor perishable goods during transportation from producer to retailer.

Syscan's TempaSure® a Smart Active Label supported temperature monitoring system, enables guaranteed indisputable temperature record of all items during the entire journey.

### The TempaSure® Evaluation Kit includes:

- HP iPAQ Pocket PC with Compact Flash expansion pack
- Syscan 13.56 MHz Compact Flash Type II RFID reader
- Syscan's TempaSure® Software designed to monitor and manage information of perishable goods
- 5 fully calibrated RFID TempaSure® Smart-Active-Labels (High Frequency 13.56 MHz band) allowing customized setting for respective goods (i.e. frozen, refrigerated, protected) and active monitoring against preset values
